Get Your Pre-orders in Early!

ALL MEMBERS MAY PRE-ORDER PLANTS DURING THE MONTH OF MARCH. For logistical reasons, we cannot accept pre-orders after April 1st. To order, visit dyckarboretum.org/florakansas-spring or call our office at 620-327-8127. Once your order is submitted, you will receive an email about pickup procedures. We process orders based on the date they are received, so get your order in early! You may pick up your plants as soon as you receive an invoice via email.

What Do We Mean By “Native”?

By Katie Schmidt, Horticulturist and Grounds Manager

How do we determine what is “native” for our FloraKansas plant selections? You can see by the categories and asterisks in the list that we do our best to clearly delineate native from non-natives, but we don't often explain how a plant qualifies as native at our FloraKansas event. The trouble is that this term can be used broadly to mean native to all of North America, or applied narrowly, to just those species in Harvey County.

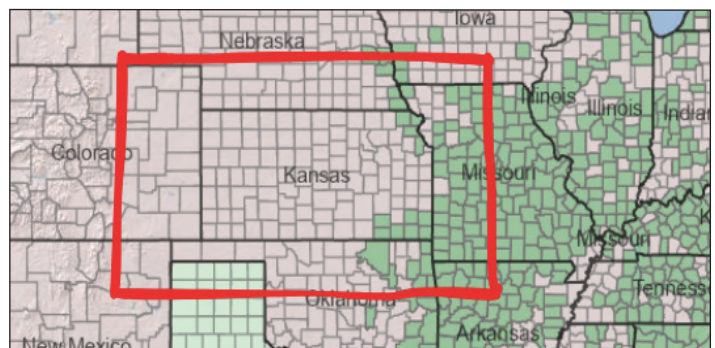

To serve our members best, we try to stick with a definition that includes all the varied ecoregions within our state and our borders. We define “native” as species found naturally occurring in our state, and the bordering half of our surrounding states. This definition includes naturally occurring varieties, as well as horticultural varieties that have not changed in leaf color or flower form.

We certainly could limit the list strictly to those within the Kansas borders, but plants don't care much about state lines. A species present in counties directly bordering us may currently, or at a previous point in time, also have been present within our state. We share climatic conditions with these regions as well: far south eastern Kansas is similar in rainfall and soil type to far southwestern Missouri, and western Kansas has many of the same common species as eastern Colorado.

Most importantly, many of the birds and pollinators that depend on these native plants are widespread throughout the region. So if you are looking to create habitat in your yard or acreage, we don't want an arbitrary state line to hold you back!

While researching each species, we look at multiple sources of its recorded range. This includes maps from the USDA Plants Database and those from the Biota of North America Program. We also peruse data from state level native plant societies and conservation groups. With these current and historic range in mind, we then take into account its preferred growing conditions and any historic shifts that it might have undergone to determine if the species is likely to meet our members' needs.

There are many ways to decide what to offer in our inventory as native, and we are continually learning and updating the list as needed. If you think a plant has been mislabeled, or have a suggestion for a species to add to our inventory, let us know!

This is a map from the USDA Plants Database profile for *Amelanchier arborea*, also known as downy serviceberry. The red square is my own, a rough guide for what to classify as 'native' at our FloraKansas event. For folks with adequate rainfall, or the desire to water supplementally, this species will grow just fine in counties slightly farther west of its recorded native range.
